Historical Information

By the early 1900s, photographic technology was becoming significantly more advanced. As the Victoria and Albert Museum's page on photographic processes notes, gelatin-silver prints "by 1895 had generally replaced albumen prints because they were more stable, did not turn yellow, and were simpler to produce." Train travel during the early 1900s provided transportation with ease and efficiency that would have been unimaginable 50 years earlier. Transcontinental journeys that took months by wagon or by ship in 1850 could take only weeks by 1900, encouraging more recreational travel.

Scope and Content

This collection contains approximately 500 photographic prints in two bound volumes that document a trip to the United States, Mexico, and Canada by a French-speaking person or group sailing from Le Havre in Normandy, France. On the first page is handwritten "Voyage en Amerique, Avril-Mai 1904." The photographs include multiple views of U.S. cities including New York, Philadelphia, Washington, Chicago, Minneapolis, New Orleans, San Antonio, San Francisco, and Seattle. The images of Mexico include people, landscapes, and churches, including the Basilica of Our Lady of Guadalupe. The images of Canada are largely rural and include Niagara Falls. The photographs also show multiple views from the railroad coach since that was the main mode of transportation used to travel across the country. There are also four unmounted prints that show Midtown Manhattan and New Orleans. They appear to be from the 1930s and unrelated to the rest of the photographs, although they have descriptions written in French on the back.
